Dear Evaluator,

We are pleased to submit our complete IT infrastructure and support solution for Ubuntu Innovations (Pty) Ltd, a 25-person technology startup based in Cape Town, South Africa. As a team of three IT Support professionals, we have designed a comprehensive solution that addresses all of Ubuntu Innovations' business and technical requirements. Our solution covers hardware and software selection, network design, security policies, backup and disaster recovery, and operational procedures.

Our solution includes:

- Hardware and Software: R303,000 hardware budget and R124,500 annual software cost, covering 20 desktops, 5 laptops, router, switch, NAS, local server, and all required software.
- Network Design: A secure network with VLAN segmentation, separate guest Wi-Fi, and a complete IP addressing plan.
- Access Control: Department-based folder permissions and shared folder structure.
- Backup and Disaster Recovery: Daily incremental backups, weekly full backups, and cloud archiving with RTO 4 hours and RPO 1 hour.
- Security: Comprehensive cybersecurity policy, risk assessment matrix, and incident response plan.
- Documentation: Troubleshooting guides, command-line reference, and security awareness training outline.

All deliverables are documented in the attached consolidated report and available on our GitHub repository.

We believe this solution provides Ubuntu Innovations with a secure, scalable, and maintainable IT infrastructure that will support their growth and business operations. Thank you for the opportunity to work on this project.

Sincerely,

The IT Support Team
