- VS Code, Git, Docker
- Switches, routers, WAPs, servers

TEAM OVERVIEW

We are a team of three Google IT Support Certified professionals who completed the Google IT Support Professional Certificate through the Capaciti Tech Career Accelerator. Together, we designed and documented a complete IT infrastructure and support solution for Ubuntu Innovations (Pty) Ltd, a 25-person technology startup based in Cape Town, South Africa.

Our combined experience spans systems administration, networking, hardware troubleshooting, software deployment, security, backup and disaster recovery, and technical documentation.

WORK EXPERIENCE

CAPSTONE PROJECT – UBUNTU INNOVATIONS (PTY) LTD

Designed a complete IT infrastructure and support solution for a 25-person technology startup in Cape Town, including hardware and software procurement (R303,000 hardware / R124,500 annual software), VLAN-separated network with guest isolation, IP addressing, department-based access control, backup and disaster recovery (RTO 4 hours, RPO 1 hour), cybersecurity policies, incident response plan, security awareness training, troubleshooting guides, and software deployment procedures with documented onboarding and offboarding processes.

IT Support and Systems Administration – Capaciti Tech Career Accelerator

Participated in an intensive IT support and systems administration programme with a focus on upskilling graduates in technical support, networking, and security. Gained hands-on experience in Windows and Linux environments, user support, hardware troubleshooting, and software deployment. Collaborated on a full-scale capstone project to design and document a complete IT infrastructure for a 25-employee company, covering network design, IP addressing, backup and disaster recovery, security policies, and technical documentation. Developed strong problem-solving, documentation, and communication skills in a professional team setting.
